1. Template Overview

iReview is a very light and fast responsive template for Joomla 2.5 and 3.0, built using the latest css techniques. It features a clean, minimalistic design and is a perfect template for review sites built with JReviews (i. e. City Guide, Products Catalog, Movie Database, Classifieds, Events, ...). The template matches the styles of JReviews themes for overall site design consistency and has guaranteed compatibility for all JReviews features.

iReview 2 brings many new features like responsive grid system designed to adapt to various resolutions of different devices (desktops, tablets, smartphones). The layout now supports two sidebars, each can be placed left or right of the main content and they can use either grid based dimensions or fixed custom dimensions. There are 38 module positions, and 8 of those can be split into any number of columns. Modules and Menus can be displayed using 18 different styles. Any type of menu can be published in any module position and any menu can be converted to a vertical dropdown for mobile devices. The template includes 17 selected quality fonts from Google Web Fonts service that can be chosen for body text, headings or logo. For site's header, showcase and footer it is possible to set the background to be transparent, light gray, dark or colored using one of the available 10 color styles.

1.1. Main Features

- Joomla 2.5 & Joomla 3.0 compatible
- Responsive layout
- Very light and very fast
- Clean, minimalistic design
- Uses HTML5 and CSS3
- Easy to customize
- Multilevel menu navigation, both horizontal and vertical
- Modules can be added to menu item dropdowns
- Dropdown navigation for mobile devices
- Google Web Fonts (preselected best fonts from Google's font service)
- 10 color styles available in different variations
- 38 module positions
- 6 module styles available in 12 different colors
- 7 menu styles available in 12 different colors

2. Template Installation

2.1. Installation Steps

1. Download the template installation file (iReview_2.1.zip) from the Client Area:
http://www.reviewsforjoomla.com/orders/client_area.php
2. In the administration area of your Joomla 2.5 site, go to Extensions -> Extensions Manager.
3. Under the **Upload Package File** click Browse button and select the downloaded iReview_2.1.zip file.
4. Click **Upload & Install**.
5. Go to Extensions -> Template Manager, select iReview template and click on **Make Default**:

The screenshot shows the Joomla! Template Manager interface. At the top, there are icons for 'Make Default', 'Edit', 'Duplicate', 'Delete', and 'Options'. A red arrow points to the 'Make Default' icon. Below this is a table of installed styles. The 'iReview2 - Default' style is selected, and its 'Make Default' button is highlighted with a red box.

	Style	Location	Template	Default	Assign
<input type="checkbox"/>	Atomic - Default	Site	Atomic	☆	
<input type="checkbox"/>	Beez5 - Default	Site	Beez5	☆	
<input type="checkbox"/>	Beez2 - Default	Site	Beez_20	☆	
<input type="checkbox"/>	Bluestork - Default	Administrator	Bluestork	★	
<input type="checkbox"/>	Hathor - Default	Administrator	Hathor	☆	
<input checked="" type="checkbox"/>	iReview2 - Default	Site	Ireview2	★	

2.2. Upgrading From iReview 1.x

iReview 2.x will not overwrite old iReview 1.x template. iReview 2 is a completely new template which needs to be installed following the steps in the above installation instructions.

If you made any customizations in iReview 1.x, those customizations are no longer compatible with iReview 2.

2.3. Upgrading From iReview 2.x

If you are upgrading the template from an earlier 2.x release, just follow installation steps 1-4 to install new version. You don't need to uninstall old version, otherwise you would lose saved template parameters.

If you modified some of the template files, make sure you backup the files before the upgrade.

3. Template Parameters

3.1. Layout

Layout	
Responsive Layout	
Enable responsive layout	<input type="radio"/> No <input checked="" type="radio"/> Yes
Maximum width	960px
Load respond.js for IE8 and below	<input checked="" type="radio"/> No <input type="radio"/> Yes
Mobile Menu	
Convert horizontal navigation to vertical dropdown on mobile devices	<input type="radio"/> No <input checked="" type="radio"/> Yes
Browser width below which to convert to mobile menu	480
Name of the menu to convert	top-menu
Title of the mobile dropdown	Menu
Sidebars	
Sidebar dimensions	<input checked="" type="radio"/> Grid columns <input type="radio"/> Fixed width
Primary Sidebar	
Primary sidebar position	Left
Primary sidebar columns	3
Primary sidebar fixed width	220px
Primary sidebar on smarphones	<input checked="" type="radio"/> Show below main content <input type="radio"/> Hide
Secondary Sidebar	
Secondary sidebar position	Right
Secondary sidebar columns	2
Secondary sidebar fixed width	150px
Secondary sidebar on portrait tablets	<input checked="" type="radio"/> Show below main content <input type="radio"/> Hide
Secondary sidebar on smarphones	<input checked="" type="radio"/> Show below main content <input type="radio"/> Hide

Link to the main RSS feed	<input type="text"/>
RSS icon title (tooltip)	<input type="text" value="Get updates via RSS"/>
Displaying options	
Open links in new tab/window	<input type="radio"/> No <input checked="" type="radio"/> Yes

4. Module Positions

4.1. Splitting Module Positions Into Multiple Columns

8 module positions can be split into any number of columns:

- header-top
- header-bottom
- showcase-top
- showcase-bottom
- content-top
- content-bottom
- footer-top
- footer-bottom

The maximum number of columns per row is 12.

To assign a specific number of columns to a module, enter `colX` in the **Module Class Suffix** parameter, where X = number of columns.

For example, to show 4 modules in 4 equal columns, enter `col3` suffix to all 4 modules:

▶ Basic Options	
▼ Advanced Options	
Alternative Layout	<input type="button" value="↓"/>
Module Class Suffix	<input type="text" value="rounded_dark col3"/>
Caching	<input type="button" value="Use Global ↓"/>
Cache Time	<input type="text" value="900"/>

5. Module Styles

The template comes with 6 different module styles which can be enabled by adding their class names in the **Module Class Suffix** parameter:

The image shows a configuration interface with two sections: 'Basic Options' (collapsed) and 'Advanced Options' (expanded). Under 'Advanced Options', there are several settings:

- Menu Tag ID:
- Menu Class Suffix:
- Target Position:
- Alternative Layout: with a dropdown arrow
- Module Class Suffix: (highlighted in yellow)
- Caching: with a dropdown arrow
- Cache Time:

The available module styles are:

- box
- box-light
- box-dark
- box-rounded
- box-rounded-light
- box-rounded-dark
- titlebar
- titlebar-light
- titlebar-dark
- titlebar-rounded
- titlebar-rounded -light
- titlebar-rounded -dark
- titlebar-outside
- titlebar-outside -light
- titlebar-outside -dark
- titlebar-rounded-outside
- titlebar-rounded-outside -light
- titlebar-rounded-outside -dark

Classes without -light and -dark suffixes will use the main theme color selected in template parameters.

Examples of all module styles can be seen on the next two pages.

6. Menu Styles

6.1. Horizontal Menus

The template comes with 7 different menu styles which can be enabled by adding their class names in the **Menu Class Suffix** parameter:

The available menu styles are:

- menu-horiz-simple
- menu-horiz-simple-light
- menu-horiz-simple-dark
- menu-horiz-buttons
- menu-horiz-buttons-light
- menu-horiz-buttons-dark
- menu-horiz-buttons-rounded
- menu-horiz-buttons-rounded-light
- menu-horiz-buttons-rounded-dark
- menu-horiz-bar
- menu-horiz-bar-light
- menu-horiz-bar-dark
- menu-horiz-gradientbar
- menu-horiz-gradientbar-light
- menu-horiz-gradientbar-dark
- menu-horiz-tworow
- menu-horiz-tworow-light
- menu-horiz-tworow-dark
- menu-vertical
- menu-vertical-light
- menu-vertical-dark

▶ Basic Options	
▼ Advanced Options	
Menu Tag ID	<input type="text"/>
Menu Class Suffix	<input type="text" value="menu-horiz-bar"/>
Target Position	<input type="text"/>
Alternative Layout	Default ▾
Module Class Suffix	<input type="text"/>
Caching	No caching ▾
Cache Time	<input type="text" value="900"/>

Classes without -light and -dark suffixes will use the main theme color selected in template parameters.

All menu types can be published to any module position. All of them support unlimited number of submenus except for „tworow“ menu type.

Examples of all module styles can be seen on the next three pages.

menu-horiz-simple

City Guide **Products Catalog** Movies & TV Shows Classifieds Events News

menu-horiz-simple-light

City Guide **Products Catalog** Movies & TV Shows Classifieds Events News

menu-horiz-simple-dark

City Guide **Products Catalog** Movies & TV Shows Classifieds Events News

menu-horiz-buttons

City Guide **Products Catalog** **Movies & TV Shows** **Classifieds** **Events** **News**

menu-horiz-buttons-light

City Guide **Products Catalog** Movies & TV Shows Classifieds Events News

menu-horiz-buttons-dark

City Guide **Products Catalog** **Movies & TV Shows** **Classifieds** **Events** **News**

menu-horiz-buttons-rounded

City Guide **Products Catalog** **Movies & TV Shows** **Classifieds** **Events** **News**

menu-horiz-buttons-rounded-light

City Guide **Products Catalog** Movies & TV Shows Classifieds Events News

menu-horiz-buttons-rounded-dark

City Guide **Products Catalog** **Movies & TV Shows** **Classifieds** **Events** **News**

menu-horiz-bar

menu-horiz-bar-light

menu-horiz-bar-dark

menu-horiz-gradientbar

menu-horiz-gradientbar-light

menu-horiz-gradientbar-dark

menu-horiz-tworow

menu-horiz-tworow-light

menu-horiz-tworow-dark

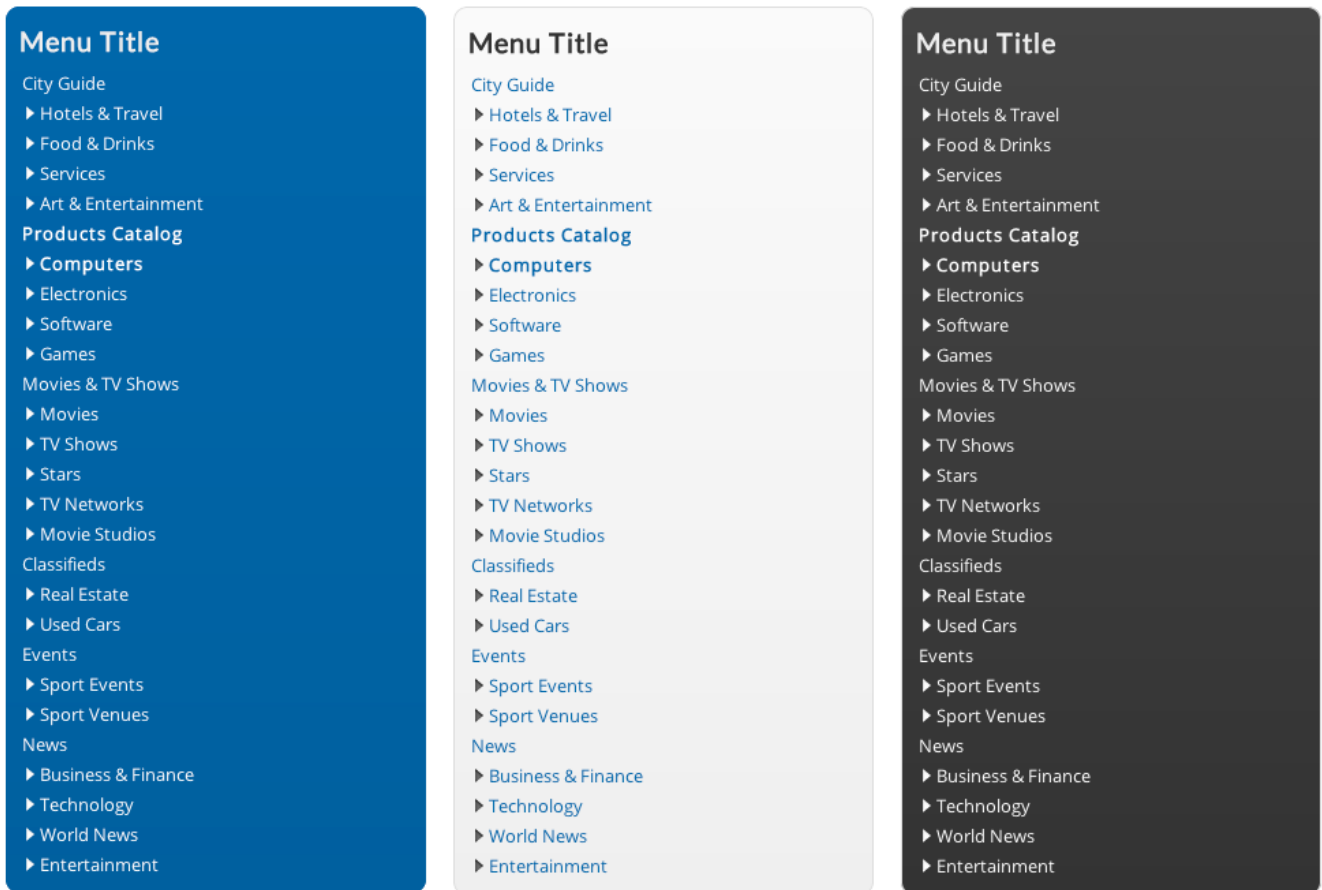

6.2. Vertical Menus

For vertical menus use „menu-vertical“ class name in the **Menu Class Suffix** parameter.

Vertical menu can be used with any of the 6 module styles and any color theme.

Example of vertical menus using „box-rounded“ module styles:

menu-vertical

6.3. Mobile Menu

Any type of menu can be converted to a „Mobile Menu“ if enabled in template parameters. If you use responsive layout, it is recommended to enable the mobile menu for your main top menu.

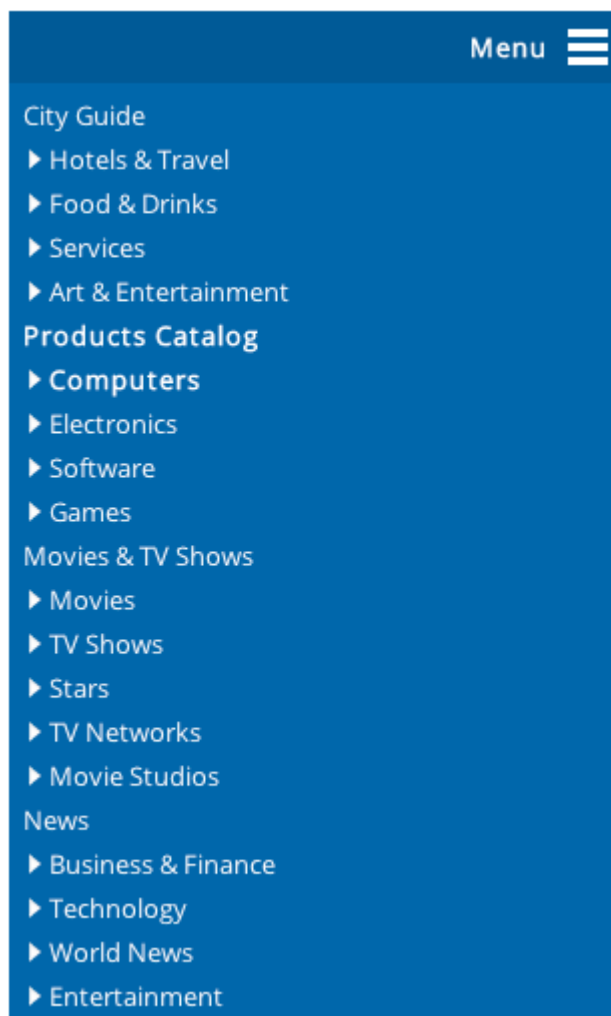

The menu that you choose in template parameters will automatically convert to vertical dropdown menu on browser resolutions smaller than 480px (the width when to convert is also configurable in template parameters).

The mobile menu will respect the chosen color styles of the non-mobile menu.

Example of how the mobile menu looks collapsed:

After the mobile visitor *taps* the menu header, it will expand like this:

6.4. Menu Item Icons

All menu types have support for icons. To add an icon to a specific menu item, edit that menu item in Joomla Menu Manager, click on the **Link Type Options** panel and chose an image for **Link Image** parameter:

The screenshot shows the Joomla Menu Manager interface with the 'Link Type Options' panel expanded. The panel contains the following fields and controls:

- Layout Options** (collapsed)
- Article Options** (collapsed)
- Integration Options** (collapsed)
- Link Type Options** (expanded):
 - Link Title Attribute:
 - Link CSS Style:
 - Link Image:
 - Add Menu Title: No Yes
- Page Display Options** (collapsed)
- Metadata Options** (collapsed)
- Module Assignment for this Menu Item** (collapsed)

Example of an menu item with icon assigned:

6.5. Additional Menu Classes

If you want to make first level menu items uppercase, you can add additional **uppercase** class name to the Module Class Suffix parameter (separated by a space).

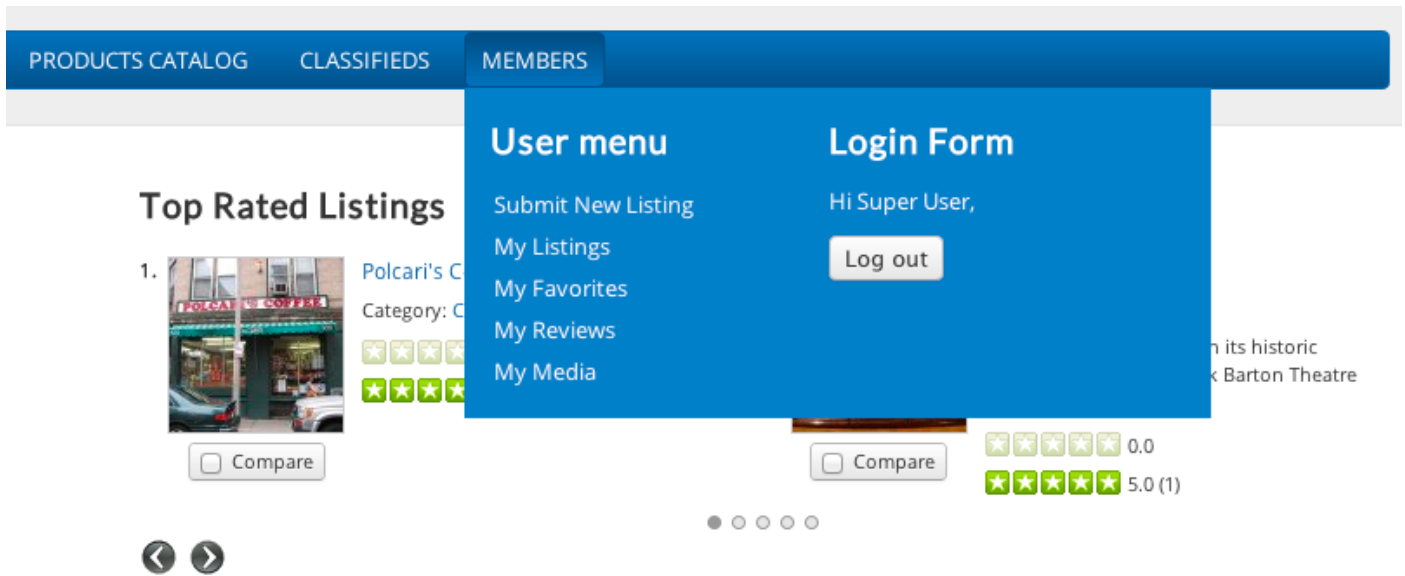

To make all levels of menu items uppercase, use **uppercase-all** class name instead.

Example:

▶ Basic Options	
▼ Advanced Options	
Menu Tag ID	<input type="text"/>
Menu Class Suffix	<input type="text" value="oriz-bar uppercase"/>
Target Position	<input type="text"/>
Alternative Layout	<input type="button" value="Default"/> ▾
Module Class Suffix	<input type="text"/>
Caching	<input type="button" value="No caching"/> ▾
Cache Time	<input type="text" value="900"/>

6.6. Modules inside menus

New feature in iReview 2.1 is the ability to add modules to menu items. For example:

First step is to create a **Text Separator** menu item in one of your horizontal menus and in the **Note** parameter enter a custom name for a module position (i.e. *menu-position-1*):

A screenshot of a 'Details' form for a menu item. The form has a light blue header with the word 'Details'. Below the header, there are several fields and controls. The 'Menu Item Type' field is set to 'Text Separator' and has a 'Select' button next to it. The 'Menu Title' field is set to 'Members'. The 'Note' field is set to 'menu-position-1'. Other fields include 'Alias', 'Link', 'Status' (set to 'Published'), 'Access' (set to 'Public'), 'Menu Location' (set to 'Top Menu'), 'Parent Item' (set to 'Menu Item Root'), 'Ordering' (set to 'Members'), 'Target Window' (set to 'Parent'), 'Language' (set to 'All'), 'Template Style' (set to '- Use Default -'), and 'ID' (set to '687').

Next, go to the Module Manager and assign one of your modules to that module position (you must type in the name of the module position, it is not possible to select it):

The screenshot shows the 'Module Manager: Module Login' interface. It features a 'Details' section with the following fields:

- Title ***: Login Form
- Show Title**: Show Hide
- Position**: menu-position-1 (highlighted in yellow) with a 'Select position' button
- Status**: Published
- Access**: Public
- Ordering**: 2. Login Form
- Start Publishing**: [empty] 23
- Finish Publishing**: [empty] 23
- Language**: All
- Note**: [empty]

And then the module will be outputted as dropdown of a menu item where you created that module position.

You can assign up to 3 modules to the same menu position and each will be outputted in a separate column.

7. Template Customizations

If something isn't possible to do via template parameters, the only solution is to customize the code of the template.

It is recommended to do customizations using css and avoid changing other files if possible.

All css modifications should be added into `/templates/ireview2/css/custom.css` file. The styles that you put there will override default styles.

Always backup your customizations to avoid losing them when upgrading the template.
